

My Project Title

Lee Wilkins

Main Image:

Include a clear, strong image of your work. If the work is just audio, include an image of whatever context you imagine it in.

Artist Statement:

Write an artist statement that describes your work. Describe the work as though it is on a gallery wall, what would you read? 50-100 words. Remember, even a small project should have some kind of theme or concept. What do you want people to experience while viewing your work?

A good place to start is:

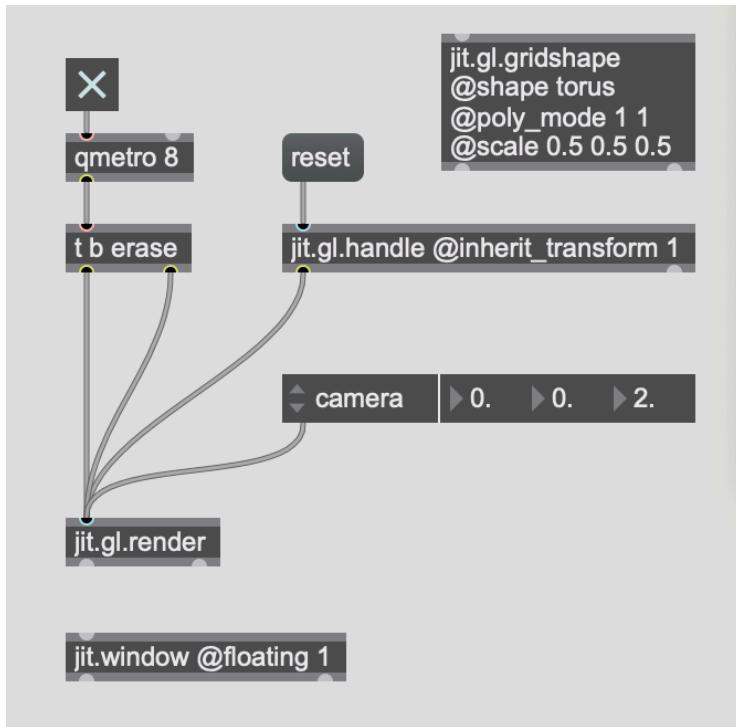

[Project Name] is an exploration of [concept]. By using [something, audio, video, samples from something?] viewers are able to experience [what do you want them to feel?].

Technical Explanation:

Explain how it works, and your process getting there. Ex: I used the camera and counter objects to create an interactive display that counted the number of people who pressed the button. I expanded on what we did in class by using the jit.rota object.. I had trouble with [something] so I used [something else].

Image of patch:

Take a clear screen shot of your patch(s) or sub patch.

Link to video

Link to the video on GitHub, YouTube, Google Drive, One Drive, or wherever. Test the link to make sure I have access.

Image of circuit

If you used an Arduino or other physical things, take a picture of them.

List of references

List any tutorials or resources you used.

Upload your .maxpat to Moodle, Save this file as a .pdf.
